Wednesday 14 May 2025

Morning (Time: 1 hour 30 minutes)

Paper reference **WPH12/01**

Physics

International Advanced Subsidiary/Advanced Level
UNIT 2: Waves and Electricity

You must have:
Scientific calculator, ruler, protractor

Total Marks

Instructions:

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- **Show all your working out** in calculations and **include units** where appropriate.

Information:

- The total mark for this paper is 80.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*
- In the question marked with an **asterisk (*)**, marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.
- The list of data, formulae and relationships is printed at the end of this booklet.

Advice:

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

SECTION A

Answer ALL questions.

For questions 1–10, in Section A, select one answer from A to D and put a cross in the box ☒. If you change your mind, put a line through the box ☒ and then mark your new answer with a cross ☒.

1: The refractive index of vegetable oil is 1.47

Which of the following is the speed of light, in $m\,s^{-1}$, in vegetable oil?

☒ **A** 1.59×10^8

☒ **B** 2.04×10^8

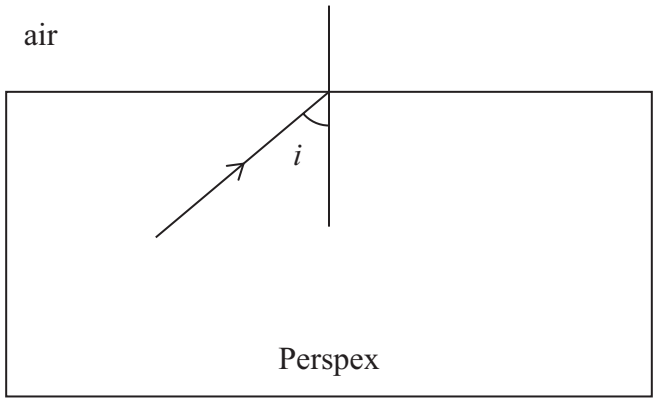
☒ **C** 3.00×10^8

☒ **D** 4.41×10^8

(Total for Question 1 = 1 mark)

2: A ray of light is incident on the boundary between Perspex and air, as shown.

The angle of incidence *i* is greater than the critical angle for the Perspex-air boundary.



Which of the following statements is correct for the Perspex-air boundary?

☒ **A** All the light is refracted.

☒ **B** All the light is transmitted.

☒ **C** All the light is reflected.

☒ **D** Some light is reflected and some light is refracted.

(Total for Question 2 = 1 mark)

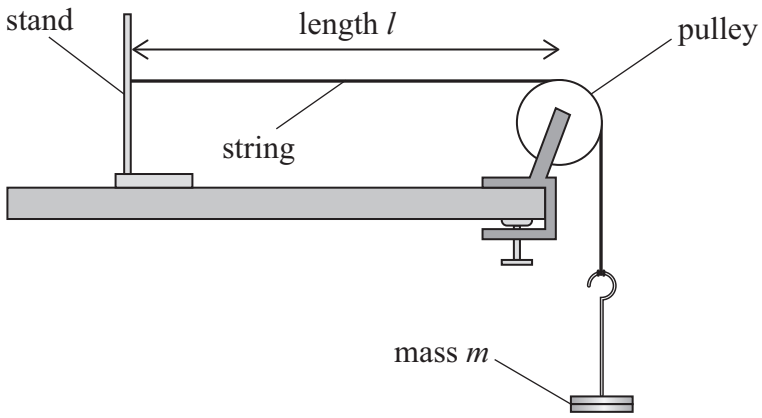
3: Which of the following units is equivalent to the coulomb?

- ☒ **A** As^{-1}
- ☒ **B** JV^{-1}
- ☒ **C** WA^{-1}
- ☒ **D** WV^{-1}

(Total for Question 3 = 1 mark)

4: A student sets up the apparatus shown.



When the string is plucked, it vibrates with a frequency *f*.

Which of the following single changes would increase *f*?

- ☒ **A** decreasing the length *l*
- ☒ **B** decreasing the mass *m*
- ☒ **C** increasing the cross-sectional area of the string
- ☒ **D** increasing the mass per unit length of the string

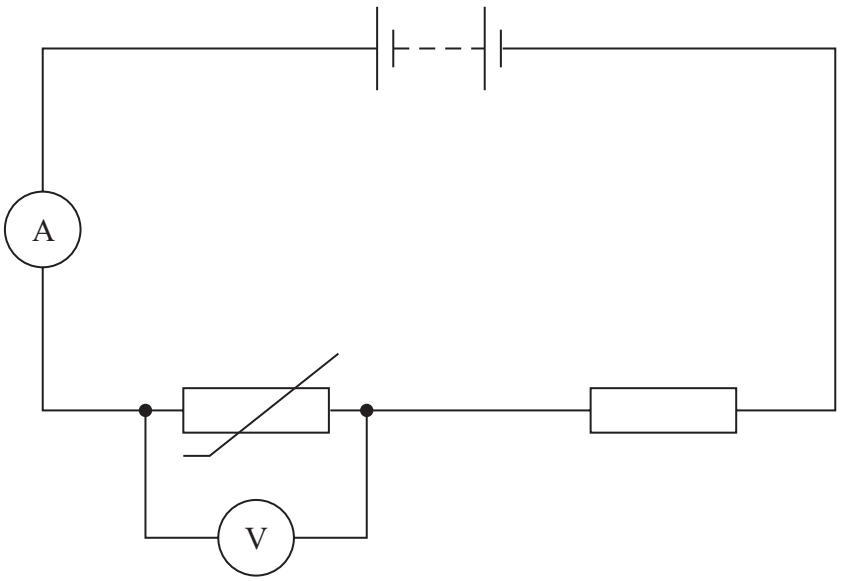
6: A negative temperature coefficient thermistor is connected in a circuit, as shown.



The temperature of the thermistor is increased.

Which row of the table gives the changes to the readings on the ammeter and the voltmeter?

	Ammeter	Voltmeter
☒ **A**	decreases	increases
☒ **B**	decreases	decreases
☒ **C**	increases	increases
☒ **D**	increases	decreases

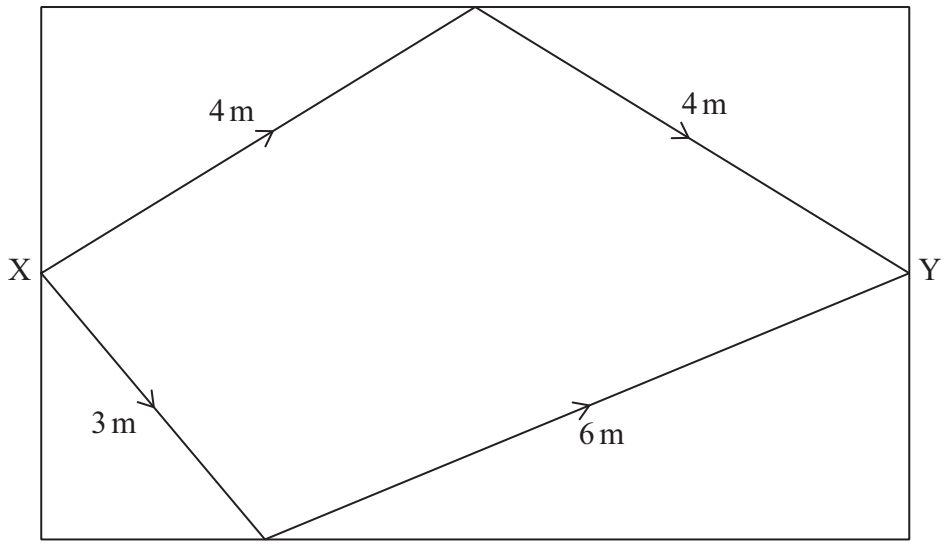
7: Two waves, of wavelength 2 m, are produced by a source at point X, as shown.
Both waves are initially in phase.

The waves travel different distances and meet at point Y.

Not to scale



Which of the following is the phase difference, in radians, between the two waves at point Y?

☒ **A** 0

☒ **B** $\frac{\pi}{4}$

☒ **C** $\frac{\pi}{2}$

☒ **D** π

(Total for Question 7 = 1 mark)

8: The cell in a solar-powered lamp stores 6.0 kJ of energy.
The lamp is switched on and the cell discharges fully.
The cell has a constant e.m.f. of 1.5 V.

Which of the following is the charge that passes through the lamp?

☒ **A** 0.25 C

☒ **B** 4.0 C

☒ **C** 4000 C

☒ **D** 9000 C

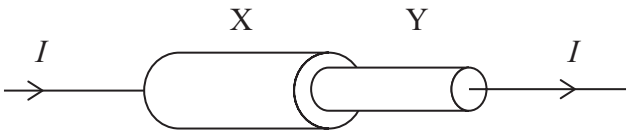
9: When monochromatic light is incident on the surface of a metal, photoelectrons are emitted.

Which of the following statements is correct?

- ☒ **A** The maximum kinetic energy of the photoelectrons depends on the intensity of the incident light.
- ☒ **B** The number of photoelectrons emitted per second depends on the frequency of the incident light.
- ☒ **C** The maximum kinetic energy of the photoelectrons depends on the frequency of the incident light.
- ☒ **D** The number of photoelectrons emitted per second depends on the work function of the metal.

(Total for Question 9 = 1 mark)

10: Two wires, X and Y, are made of the same material. The wires are connected in series. The current in the wires is I, as shown.



Wire X has twice the diameter of wire Y.

The mean drift velocity of electrons in wire X is v.

Which of the following is the mean drift velocity of electrons in wire Y?

- ☒ **A** $0.25v$
- ☒ **B** $0.5v$
- ☒ **C** $2v$
- ☒ **D** $4v$

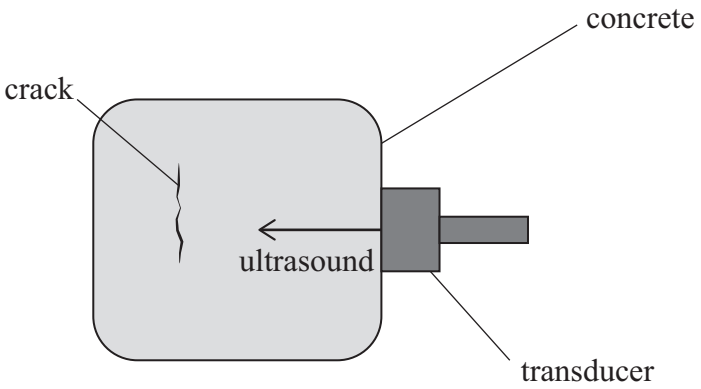
13: Concrete is often used in building construction.

After several years, concrete may develop cracks. Ultrasound can be used to find these cracks.

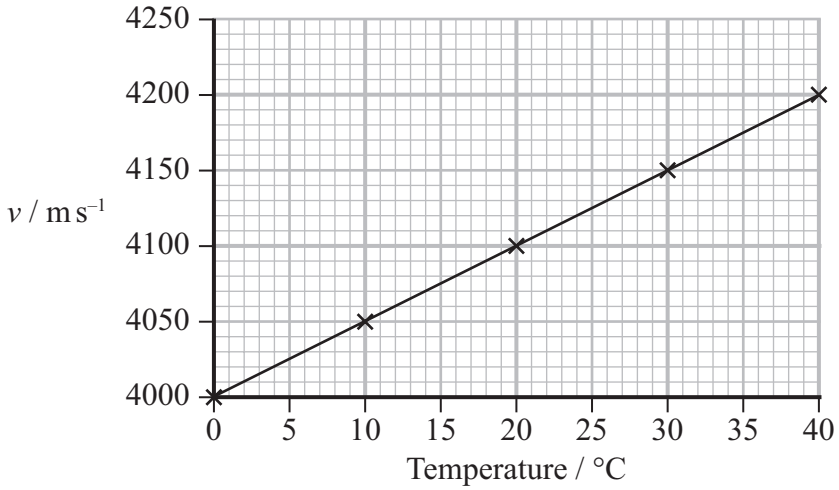
A transducer sends pulses of ultrasound into a piece of concrete, as shown.



The transducer detects pulses of ultrasound reflected from the crack.

To be detected, the reflected pulse must not overlap with the pulse emitted by the transducer.

(a) In this piece of concrete, the speed v of ultrasound varies with temperature, as shown.



DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

A pulse of ultrasound is incident on a crack in this piece of concrete. The crack is a distance of 4.0 cm from the transducer.

The temperature of the concrete is 23 °C.

Deduce whether the transducer can detect ultrasound reflected from this crack.

duration of ultrasound pulse = 200 μs

(4)

(b) Pulses of ultrasound with a higher frequency can be used to find cracks of shorter length.

Explain why a higher frequency is used.

18: Some types of glue can be hardened by exposure to ultraviolet (UV) light.

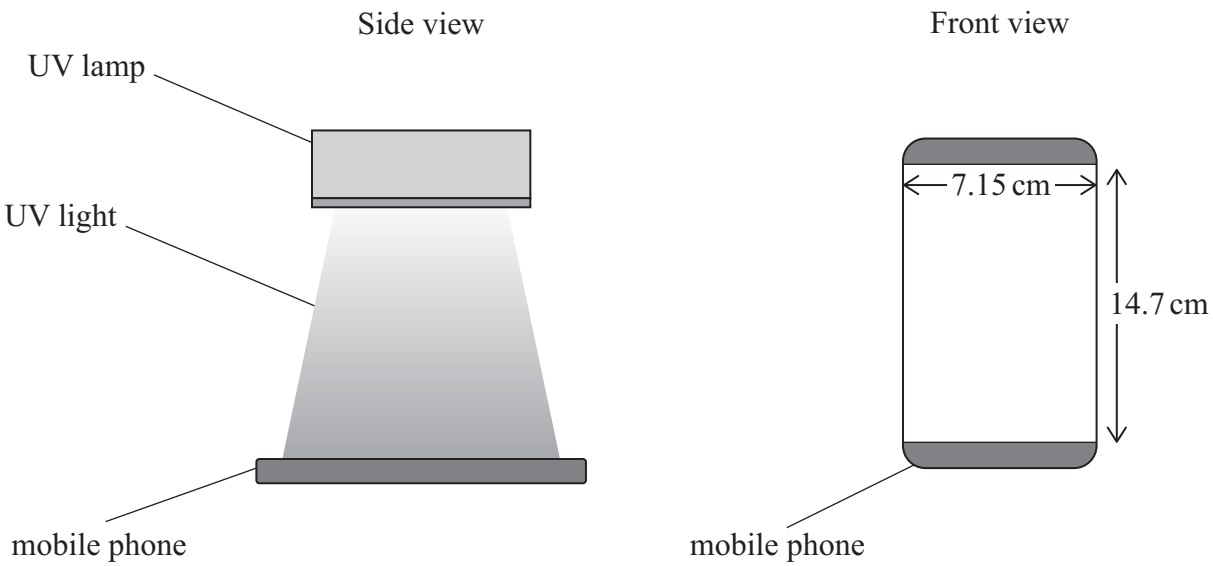
(a) One type of UV lamp contains mercury atoms in an evacuated glass tube. When a large potential difference is applied between two electrodes in the tube, electrons move between the two electrodes. These electrons collide with the mercury atoms in the tube.
These mercury atoms then emit photons.

Explain why the mercury atoms emit photons.

(2)

(b) A technician is replacing the screen on a mobile phone. He spreads a layer of glue over the phone surface and attaches the glass screen. The glue is then hardened when exposed to UV light.

The equipment used and screen dimensions are as shown in the following diagram.



The intensity of the UV light received on the screen is 50 mW cm^{-2}.

The glue takes 25 s to harden.
